DETAILED ACTION

1. Applicant's Preliminary Amendment 5/23/01, (Paper NO: 4) is acknowledged.

Claims 1-8 are pending.

Election/Restrictions

2. Restriction is required under 35 U.S.C. 121 and 372. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-4, 6 and 8 drawn to a method for inhibiting osteoclast formation.

Group II claims 1- 8, drawn to a method for inhibiting bone resorption.

The inventions listed as Groups I-VII do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The special technical feature of Group I is considered a method for inhibiting osteoclast formation .

The special technical feature of Group I is considered a method for inhibiting bone resorption.

Accordingly, Groups I-II are not so linked by the same or a corresponding special technical feature within meaning of PCT Rule 13.1 so as to form a single general inventive concept.

Species Election

3. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Art Unit: 1644

If Groups I or II is elected, applicant is required to elect a specific method for inhibiting osteoclast formation or a specific method for inhibiting bone resorption, wherein specific inducing factor selected from the group recited in claims 6 and 8.

These species are distinct because each specific method differ with respect to the specific inducing factor thus each specific method employing a specific inducing factor represents patentably distinct subject matter. Furthermore, the examination of specific inducing factor selected from the group recited in claim 6 and 8 in a specific method for inhibiting osteoclast formation or in a specific method for inhibiting bone resorption, would require different searches in the scientific literature.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

4. Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. M.P.E.P. § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

5. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
